

Northern California DX Club Meeting: Jan. 13, 2005

Rich Holoch KY6R to speak on *DX-ing with Wire*

Rich Holoch KY6R, Dxr and wire antenna wizard, will reveal how he has worked over 290 DXCC entities since May 2001 and achieved 7BDXCC both CW and SSB using wire antennas and only 200 watts or less. This talk wowed the crowd at Pacificon.

Entitled *DX-ing with Wire*, Rich's presentation describes the aggressive DX goals that he sought to attain using wire antennas. He outlines the constraints imposed by his location, propagation, and the declining sunspot cycle, showing how these factors determined which antenna was best for each band.

The talk reveals the practical design, installation, simulation and performance of wire antenna ranging from simple doublets and end-fed Zepps to half squares and more complex phased arrays and curtains. Rich's presentation is full of useful information that you can use to improve the performance of your station.
